PROFESSIONAL SUMMARY

Final-year B.Tech Computer Science and Engineering (Cyber Security) student at Siddharth Institute of Engineering and Technology, Tirupati (CGPA 8.6/10, expected graduation 2027). Built a foundation in C++ data structures and algorithms, HTML and CSS (Flexbox, Grid, responsive design) and core computer science subjects; currently learning JavaScript and strengthening Python. Developed Mini-SIEM, a Flask and SQLite security log monitoring project, and completed a cybersecurity training internship. Seeking an entry-level software or web development role, or a cybersecurity analyst trainee role, including internships with a path to full-time employment.

TECHNICAL SKILLS

Programming: C++ (data structures and algorithms coursework), Python (beginner)
Web Development: HTML, CSS (Flexbox, Grid, responsive design); JavaScript (currently learning)
Project Exposure: Flask, SQLite (used in Mini-SIEM project)
Computer Science Fundamentals: Data Structures and Algorithms, Object-Oriented Programming, DBMS, Computer Networks
Cybersecurity (foundational): Security fundamentals, threats and vulnerabilities, security log analysis concepts
Tools and Cloud: Git, GitHub (basic), Linux (basic), Visual Studio Code, Oracle Cloud Infrastructure (foundations)

PROJECTS

Mini-SIEM — Security Information and Event Management System | Python, Flask, SQLite, HTML, CSS, JavaScript

- Developed a web-based security monitoring application using Flask and SQLite that parses security logs and flags suspicious activity.
- Implemented detection logic for suspicious logins, brute-force attempts, port scans and malware-related events, with severity classification.
- Built a SOC-style dashboard using HTML, CSS and JavaScript to view security events, alerts, threat activity and suspicious IP addresses.
- Added an alert status workflow (Open, Investigating, Resolved) with persistent SQLite storage, plus IP investigation and CSV alert export.

Cybersecurity Log Analyzer | Python

- Developed a Python-based tool to process and analyze security logs and identify potentially suspicious activity.
- Applied basic cybersecurity concepts and data analysis techniques to examine log data and interpret potential security events.

INTERNSHIP

Cybersecurity Intern — Tech Vedhu (Remote, training-based) May 2026 – Jun 2026

- Completed a structured, project-based cybersecurity training internship covering security fundamentals, common threat vectors and vulnerability categories.
- Analyzed security awareness scenarios to identify risk factors and recommend preventive best practices.
- Worked in a remote, team-based learning environment, applying theoretical concepts to guided problem-solving exercises.

EDUCATION

B.Tech, Computer Science and Engineering (Cyber Security) 2023 – 2027
Siddharth Institute of Engineering and Technology, Tirupati | CGPA: 8.6/10

Intermediate (Class XII) — Board of Intermediate Education, Andhra Pradesh | 87.7% 2023

SSC (Class X) — CBSE | 72% 2021

CERTIFICATIONS

Certifications: Oracle Cloud Infrastructure Foundations Associate — Oracle; Cisco Python Essentials 1 — Cisco Networking Academy; HackerRank Python (Basic) — HackerRank

Course Completion: C++ Data Structures & Algorithms + LeetCode Exercises — Udemy (October 2026); Cyber Security — Tech Vedhu (2026); Full Stack Development, 5-Day Skill Advanced Course — Orion Grid, Bengaluru (June 2025); Python Programming — Takeoff Edu Group (November 2024)

Workshop Participation: Cyber Security Workshop — Certificate of Participation

ACHIEVEMENTS

- Prize for outstanding academic performance, academic year 2025–26 — Siddharth Institute of Engineering and Technology (Silver Jubilee Celebrations).
